

MICORS

recover | reuse | recycle

MICORS Special is suitable for all liquids such as water, soft drinks, liquids, oils, fuels, greases, solvents and organic acid absorption.

The liquid absorbing product does not stain or leak, but the absorbed liquid can be squeezed out if necessary. Different size absorbent pads and mats allow continuous maintenance absorption.

The absorbing powder can be used for example by scattering the powder on the absorbent material, spreading the powder with the spatula so that it can absorb all of the absorbable material, after which it can be collected (eg sweeping the floor surface).

The absorbent pads are also well suited for hard-to-reach items and ready-made pads and carpets are easy to dispose of. If there is no need to squeeze the absorbed liquid for further use, the used product will be disposed of by delivering it to an oil collection point. When the liquid is pressed out for further use, the used powder is biodegradable waste.

The product is very long lasting compared to conventional absorbents: 1 liter (about 56g) absorbs and binds 900 ml of absorbable liquid and absorbs rapidly. The product differs from other absorbents, also due to the further processing potential of the absorbed liquid. In addition, the use of MICORS products is significantly more cost-effective.

- Capillary phenomenon based absorption method
- Biodegradable and non-toxic
- Nonflammable
- Ready-to-use absorbing powder, pillows, mats and pads etc.
